

Eve Single Pro-line DE

A smart, elegant and Eichrecht conform charging solution for home and business

Alfen's Eve Single Pro-line DE has been designed to offer a compact solution for home and business. The Eve Single Pro-line DE meets all Eichrecht requirements and combines them with Alfen's smart charging standards. Its 11kW - 22kW single socket is housed in an elegant polycarbonate case which is lightweight, yet durable. The charging station can be wall or pole-mounted to suit the situation. A tethered version with plug and cable storage facility is also available.

The user interface with 3.5" full colour display provides information about the actual charging speed and other charging details for the user. The display also offers a unique branding opportunity showing company logos. The charger incorporates user authentication options but also allows for plug and charge easy access, with users able to access usage data via any web-enabled device.

Eve Single Pro-line DE

The charging station

Advanced smart functionality

Market leading smart functionality, with internet connection via GPRS (SIM) or ethernet cable. The Eve Single Pro-line can communicate with, and respond to commands from, other smart technologies and solutions based on shared common standards and open protocols.

Full colour 3.5" screen with logo upload

A smaller version of the much-loved screen of our larger flagship product, offering easy interface with the user. Its popular logo upload facility offers a unique business branding opportunity.

Choose and change management system

Available with Alfen's own management system or can be integrated with any OCPP-compliant back office and payment system to support billing and settlement. Changing management systems requires a simple SIM card replacement.

Alfen Smart Charging Network

Network up to 100 Alfen single socket or 50 dual socket charging stations on a single site, with load balancing to optimise the grid connection.

Designed to integrate

The charger is designed for grid and energy optimisation, making it capable of interoperation with renewables and storage via smart meters or energy management systems. In addition it can be controlled remotely by the grid operator and maximize phase imbalance to a pre-set value.

Eichrecht

The Alfen Eve Single Pro-line DE is specifically designed for semi-public and public locations and is fully Eichrecht conform. All users can easily verify their charging data.
